

Quick Guide of Seetong

This guide aims to show you the fastest way to surveillance device's real time video through Seetong mobile client. The contents of the manual will be updated from time to time without prior notice. Seetong mobile client mainly through the following steps to surveillance IP Camera real time video.

1. IP Camera network configuration

Take device through cable network auto login to cloud management server's system default enterprise for example.

Power on IP camera and login in webpage of IP camera. Click "Config" then click "Network"- "Ethernet Setup" to set up IP camera network configuration, as shown below.

Ethernet Setup	
MAC Address	00:ce:06:25:02:29
DHCP Function	Disable
IP Address	192.168.66.222
Net Mask	255.255.255.0
Gateway	192.168.66.1
DNS1	202.96.128.86
DNS2	202.96.134.133

IP Address set as router's legitimate local network IP, DNS1 and DNS2 set as router's DNS1 and DNS2(WAN IP of router must support surf on the Internet). Save "Ethernet setup" and use new IP to login webpage. Click "Network"- "Network Status" to query network status, as shown below. Cloud login status as 1 means device has login cloud system server successfully.

Network Status	
Wire Net	
MAC Address	00:CE:06:25:02:29
IP Type	Static IP
IP Address	192.168.66.222
Gateway	192.168.66.1
Net Mask	255.255.255.0
DNS1	202.96.128.86
DNS2	202.96.134.133
Cloud Login Status	
Login Status	1
Device Cloud ID	102304.seetong.com

Note: Recommend router defaults enabling UPNP, IP camare firmware version must be 2.5.0.0 and above.
